What is Wireless Broadband?

Wireless Broadband Service is a high speed internet service similar to DSL or Cable Internet service. It is provided by installing a radio/antenna combination outside your home that is

pointed to a broadcast tower nearby. It does not use satellites to deliver the service so it does not suffer from long delay

called latency, caused by sending the signal great distances. It also is not affected by weather the way that satellite service is. Our service continues to work great during rain and snowstorms.

Our residential service give you up to 5Mb/sec download speed and up to 768K/sec upload speed. This is similar to DSL or Cable Internet service. We don't tie you into a 1 year or longer contract like other providers do. You can cancel your service at anytime.

How Much Does It Cost?

We have 4 service plans that are based on the amount of information that you transfer in one month. The 12Gb Basic Plan starts is \$29.95/month and allows 12GB of transfer in your billing cycle. The Standard Plan is \$39.95/month and allows 35GB of transfer in your billing cycle. The Advanced Plan doubles your transfer to 75GB/month and only costs \$10/more at \$49.95. The Professional Plan allows 200GB of transfer per month and costs \$69.95/month If you go over any plan you will be charged \$1.00 to \$1.50 a gig depending on your plan. We don't charge a set up fee but there is an install fee. The fee depends on the type of service that is required at your location. The cost of installation is currently \$199.99. We can do a FREE site survey and give you an estimate on what the install will cost.

How Much is a GB? How will I know what plan I would need to sign up for?

1GB is over a full cd's worth of information. It is the equivalent of viewing approximately 10,000 web pages, 100,000 email messages (without attachments) or about 250 MP3 songs downloads. If you have only one computer and you mostly just browse the internet and send and receive text email messages then the Basic plan should suit you well. If you like to download MP3's or watch a lot of streaming video then you will probably want the Advanced Plan. If you download movies, are heavy into MP3's, and like to download and try out quite a bit of software then you may the Professional Plan.

Wireless Broadband Service doesn't use a phone line. You can have any type of phone service that you want, or none at all. We supply all the equipment to get the internet service to a single point inside your home or business. The equipment is leased to you for as long as you keep your service active. We own and control all equipment used in delivering the service to you. You don't need to worry about equipment failures or warranties since we are responsible for that part of the service. If you have more than one computer or electronic device that requires internet access you will need to purchase a router separately. Wireless routers are available for purchase from us or our services works with most standard routers.

	Basic	Standard	Advanced	Professional
Total Monthly Transfer	12GB	35GB	75GB	200GB
